11-6 Arc Lengths and Areas of Sectors . Objective: Know and use the formulas for arc lengths and the areas of sectors of circles. There are two different numbers that describe the size of an arc. One is its measure, $m\widehat{YZ}$. The other is the arc length, the length of the piece of the circumference that is \widehat{YZ} . It is a fraction of the whole circumference.

Therefore, the arc length
formula is given by: When
the central angle is
measured in degrees, the arc
length formula is: Arc
length = $2\pi r(\theta/360)$ where, θ
indicates the central angle
of the arc in degrees. r
indicates the radius of the
arc. When the central angle
is in radians, the arc
length formula is: Arc
length = $r \cdot \theta$. Where, θ ...
