Gaussian Elimination And Lu  
7 Gaussian Elimination and LU Factorization In this ?nal section on matrix factorization methods for solving  $Ax = b$  we want to take a closer look at Gaussian elimination (probably the best known method for solving systems of linear equations). The basic idea is to use left-multiplication of  $A$  ? $C_m \times m$  by (elementary) lower triangular matrices,  $L$

In the next few minutes, I want to reformulate the Gaussian elimination process in a matrix form.

Specifically, I want to rephrase as construction over certain factorization of the matrix of left-hand side. Specifically, this will be an LU decomposition. Let's see how it works. So Gaussian elimination works column by column.
