PRIMER v7 provides a wide range of univariate, graphical and multivariate routines for analysing arrays of species-by-samples data from community ecology. Data are typically of abundance, biomass, % area (or line) cover, presence/absence etc. and arise in biological monitoring of environmental impacts and more fundamental ecological studies.

However, data collection is merely the first step of metabolomics, and metabolomics is ultimately an integration of instrumentation, chemistry, statistics, and computer science with a biological problem 4, 30, 31. Here we provide a primer on metabolomics discussing its process, the types of data that are obtained, and its applications.
