The fossil is larger than most modern amphibians, but smaller than most ancient fish. C The fossil has some body structures that are similar to amphibians and some body structures that are similar to fish. D The fossil was discovered near a lake, which shows that the organism needed water to reproduce, as do amphibians and fish. Biology . 6. Go ...

MCAS Practice Test Biology High School

Where found? A single species, the hellbender (Cryptobranchus alleganiensis) occurs in the eastern United States, while Asian species occur in both China and Japan. They are the largest living amphibians known today. The Japanese giant salamander (Andrias japonicus), reaches up to 1.44 m (4.7 ft), feeds on fish and crustaceans, and has been known to live for more than 50 years in captivity.[2]

Adventist Youth Honors Answer Book Nature/Amphibians

Some classes (cyclostomes, osteichthyes fish and amphibians) have a larval stage. With rare exceptions, fish, amphibians, reptiles and monotreme mammals are oviparous; egg-laying (embryos develop within eggs and outside the mother's body), marsupial and placental mammals are viviparous (embryos develop inside the mother's body, feeding from her).

Chordates—Biology Questions

Classification quiz: Reptile, mammal, amphibian, fish. In this exercise, students will learn to distinguish if organisms fall under the categories earlier listed. Reptiles (example, lizard, crocodile) lay eggs and have a slender body. Amphibians (e.g. toad and frog) partly live on land and in water. mammals (e.g. man, money, dog) have bodies covered by hair. birds (e.g. parrot) have wings. lay eggs and have two limbs. fish (e.g. sharks) live in water.

Classification quiz-Reptile, mammal, amphibian, fish

In given cladogram, characteristic that separates bony fish from amphibians is 'lungs', as lungs are absent in bony fishes, while present in amphibians. Thus, the correct answer is option (D). Thanks. answered: j015. d. lungs.

Consider the cladogram. A cladogram is shown. Amphibians

Division of Fish and Wildlife Wildlife Diversity Group 625 Broadway Albany, New York 12233-4754 This web version is based upon an original hard copy version of Checklist of the Amphibians, Reptiles, Birds and Mammals of New York, Including Their Protective Status which was first published in 1985 and revised and reprinted in 1987.

Checklist of Amphibians, Reptiles, Birds and Mammals of

Zoology staff survey rare animal species of all vertebrate groups (mammals, birds, reptiles, amphibians, and fish) and selected rare species from the invertebrate groups of butterflies and moths, beetles, dragonflies and damselflies, mayflies, and freshwater bivalve mollusks. Zoology staff also collect data on significant animal concentration areas.

Rare Animals—NY8-Dept-of-Environmental-Conservation

Amphibians are vertebrate tetrapods. Amphibia includes frogs, salamanders, and caecilians. The term amphibian loosely translates from the Greek as "dual life," which is a reference to the metamorphosis that many frogs and salamanders undergo and their mixture of aquatic and terrestrial environments in their life cycle.
