Bohr Models of Ions - Ms. Lindroos Online

Ions. Atoms can gain or lose electrons. This causes them to become electrically charged. IONS = electrically charged atoms that have gained or lost electrons. Remember that an atom is neutral because the positive proton charged and the negative electron charges = zero... so if you add or subtract an electron, the atom 's charge no longer equals 0

Bohr Diagrams

Bohr Diagrams of Ions •Noble gases do not form compounds because they have a perfectly full outer orbit. This electron arrangement makes them very stable and so they do not react.
