In Section 18.5, the handling of nitrogenous waste is discussed, followed by other roles of the excretory system in detoxification (Section 18.6) and non-excretory roles (Section 18.7). Excretory functions of cells outside the gut (such as nephrocytes) are covered in Section 18.8, and water regulation at an organismal level in Section 18.9.

Digestive Excretory

Abstract. The observation that the metabolic heat production of an animal (H_t) is increased as a consequence of eating is as old as calorimetry, being contained in the first records of Lavoisier ² 1. The ruminant nutritionist quantifies this association between food intake and H_t by use of the expression 'the heat increment of feeding' (HIF) which describes the increase that occurs in H_t ...

~~Energy costs of digestion and metabolism in the gut ...~~

Such a system regulates the outflow of gases, water, salts, and a wide variety of nitrogenous and nonnitrogenous organic compounds. It should be emphasized that although the kidney is one of the most important excretory organs it is not the only one. In fact, every mammalian surface is a

potential excretory organ.

Review

~~MGI—Biology of the Laboratory Mouse~~

~~—MGI Mouse Genome ...~~

Abstract. Gram-negative microorganisms such as Enterobacteriaceae and Pseudomonaceae normally belong to the flora of the digestive tract. This close and peaceful coexistence may reflect a relatively low virulence of the bacteria, although under certain circumstances, invasion of the blood stream can occur.
