Control is a process of causing a system variable such as temperature or position to conform to some desired value or trajectory, called reference value or trajectory. For example, driving a car implies controlling the vehicle to follow the desired path to arrive safely at a planned destination. If you are driving the car yourself, you are performing manual control of the car. If you use design a control system or use a computer to do it (Like Google Car)then you have built an automatic ...

Control Systems can be classified as SISO control systems and MIMO control systems based on the number of inputs and outputs present. SISO (Single Input and Single Output) control systems have one input and one output. Whereas, MIMO (Multiple Inputs and Multiple Outputs) control systems have more than one input and more than one output.
