Dairy farming is a class of animal agriculture that produces milk that will be used for human consumption. A vast majority of animals on dairy farms are subjected to repetitive, forced pregnancies in order to produce as much milk as possible until reaching an age where dairy production drops and the animal is no longer needed.

Dairy Farming: The Truth About Consuming Milk and Cheese

After this, farmers generally aim for their cows to calve again every 12 months. Dairy cows lactate (produce milk) for about 10 months after calving. The average UK dairy cow produces almost 8000 litres of milk each year and has just under 4 lactations (milk producing cycles) in her lifetime of typically six and a half years.

Dairy Cows - Farming - rspca.org.uk

Dairy farming is a class of agriculture for long-term production of milk, which is processed (either on the farm or at a dairy plant, either of which may be called a dairy) for eventual sale of a dairy product.

Dairy farming - Wikipedia

Dairy farming is a lucrative business, providing income for millions of people, but there are some essential things you need to do before you venture into the dairy milk production business. You have to decide on the size of your dairy farming project i.e. the size of your dairy herd; location of the milk dairy farming business e.g. a dairy farm , and your target market.

Starting Dairy Farming Business Plan (PDF) - StartupBiz Global

Dairy farming has been part of agriculture for thousands of years. Dairy cows are bred specifically to produce large quantities of milk. Dairy cows are required to give birth to one calf annually in order to produce milk for 10 months of the year. They are usually artificially inseminated within three months of giving birth.

About dairy cows | Compassion in World Farming

The farm combines winter and spring production on a 30/70 split Super levy The land base then was about 100 acres and coping with the milk quota was challenging.
