Our BSc Developmental Biology course will show you how the single cell formed at fertilisation forms an embryo and then a fully formed adult organism.

Developmental biology is a multidisciplinary field that integrates genetics, molecular biology, biochemistry, cell biology, anatomy, physiology and computer modelling, giving you a grounding in a range of biological disciplines.

Developmental Biology's goal is to publish high quality papers providing causal insight into the cellular and molecular mechanisms that govern developmental processes. Studies which simply confirm an established functional role for a developmental component by presenting analysis in a new species lack sufficient novelty for consideration.

study of how a single cell, the fertilized egg, gives rise to a new organism. This is surely one of the most inspiring processes in biology and has fascinated scientists since ancient times. In just over seven weeks, a fertilized human egg, shown here on the left, gives rise to an embryo with many recognizable features.
