## Stanadyne Pump Troubleshooting and Installation

Today's diesel fuel injection pumps are under pressure – even more pressure than what was once considered “normal.” Around 15-20 years ago, it was common for fuel injector pumps to process fuel in a system at around 10,000 to 15,000 psi (pounds per square inch). But that's only about half of what engines are expected to do today. Fast ...

The Yanmar injector pump delivers precisely metered and timed bursts of fuel to the fuel injectors via the injector lines. Fuel is delivered to the injector pump by a low pressure feed pump (lift pump). The injector pump draws fuel from the feed supply and distributes high pressure fuel to the injectors and the spill circuit.

The fuel pump will come on when the fuel pressure within the fuel lines drops to a certain level. Once that level is reached, the fuel pump shuts off. The cycle between on and off time for a fuel pump is measured in seconds. A fuel injector will open when it receives a pulse generated by the car's computer.
