Discrete Event System

Simulation Overview
the system state are discontinuous and each change in the state of the system is called an event. The model used in a discrete system simulation has a set of numbers to represent the state of the system, called as a state descriptor. In this chapter, we will also learn about queuing simulation, which

Discrete Event System

Simulation of events in time. Each event occurs at a particular instant in time and marks a change of state in the system.

Between consecutive events, no change in the system is assumed to occur; thus the simulation time can directly jump to the occurrence time of the next event, which is called next-
