Earthquake Resistant Buildings Design - AboutCivil.Org

When designing earthquake safe structures the first consideration is to make the highest bit, the roof, as light as possible. This is best done with profiled steel cladding on light gauge steel Zed purlins. This can also have double skin with spacers and insulation. It can have a roof slope between 3 and 15 degrees.

In earthquake-proof building designs, the diaphragms are a key component in the building's structure. They include the floors and the roofs; structural engineers should ensure to place each diaphragm on its own deck and strengthen it horizontally so it shares sideways forces with the vertical structural members.
