Drainage - FDOT

Roads will affect the natural surface and subsurface drainage pattern of a watershed or individual hillslope. Road drainage design has as its basic objective the reduction and/or elimination of energy generated by flowing water. The destructive power of flowing water, as stated in Section 3.2.2, increases exponentially as its velocity increases.

CHAPTER 4 DRAINAGE DESIGN

Program for quick and efficient surface water / storm drainage design. Rainfall rates are calculated from hydrological data available from the database or from the Wallingford maps, and the system is sized by the Modified Rational method developed by H R Wallingford. Full hydraulic data is available for each pipe section.
