$2=(5327) 8$. If the number of bits is not a multiple of three, then we add 0s to the left of the most-significant bit. For example, $(10111011)_2 = (273)_8$ because of the grouping $010\ 111\ 011\ 273$

Conversion from octal to binary is just as straightforward; each octal digit is simply replaced by three bits that denote the same value.
