## *Gas Turbine Engines 4 Edition*

The Soviet Navy commissioned in 1962 the first of 25 Kashin-class destroyer with 4 gas turbines in Combined gas and gas propulsion system. Those vessels used 4 M8E gas turbines, which generated from 54,000 kW (72,000 hp) up to 54,000 kW (96,000 hp). Those ships were the first large ships in the world to be powered solely by gas turbines.

the OEM's facility, may be witnessed by end-user reps. Sometimes functional, no-load tests are conducted.

*Gas Turbines | ScienceDirect*  
The superior power-to-weight ratio of the gas turbine and its fixed speed gearbox, allows for a much lighter prime mover than for the Toyota Prius (a 1.8 litre petrol engine) or the Chevrolet Volt (a 1.4 litre petrol engine). This in turn allows a heavier weight of batteries to be carried, which allows for a longer electric-only range.
