An illustration of several key components in a typical four-stroke engine. For a four-stroke engine, key parts of the engine include the crankshaft (purple), connecting rod (orange), one or more camshafts (red and blue), and valves. For a two-stroke engine, there may simply be an exhaust outlet and fuel inlet instead of a valve system.

[Component parts of internal combustion engines - Wikipedia](#)

Gasoline engines use small, sudden gasoline explosions to drive pistons that the crankshaft turns into rotary motion. Gasoline engines mix fuel and air before entering the cylinder, then ignite it by a spark in the cylinder—as opposed to diesel engines, which inject them at different times and ignite by compression.

Petrol engine (British English) or gasoline engine (American English) is an internal combustion engine with spark-ignition, designed to run on petrol (gasoline) and similar volatile fuels. In most petrol engines, the fuel and air are usually pre-mixed before compression (although some modern petrol engines now use cylinder-direct petrol injection).The pre-mixing was formerly done in a ...
