PATHOPHYSIOLOGY OF THE HEMATOLOGIC SYSTEM . Most hematologic diseases reflect a defect in the hematopoietic, he-mostatic, or RES systems. The defect can be quantitative (eg, in-creased or decreased production of cells), qualitative (eg, the cells that are produced are defective in their normal functional capac-ity), or both.

Hematologic Malignancies. Blood/hematologic cancers most often begin in the bone marrow where blood is produced. Stem cells in the bone marrow develop into white blood cells, red blood cells, or platelets. Blood cancers occur when uncontrolled growth of abnormal blood cells overtakes the development of normal blood cells and interferes with the regular functions of these cells.
