Solution 1. For this problem, it is important to recall the relation  $\vec{E} = -\nabla V$  where  $\nabla = \frac{d}{dx} \hat{x} + \frac{d}{dy} \hat{y} + \frac{d}{dz} \hat{z}$  which, in one dimension, can be rewritten  $\vec{E} = -\frac{dV}{dx} \hat{x}$  or without the vector notation  $E = -\frac{dV}{dx}$ . We are given a graph of the electric field and asked to find the potential.

Homework 3 - Solutions. Note: Each part of each problem is worth 3 points and the homework is worth a total of 42 points. 1. State Space Representation to Transfer Function Find the transfer function  $G(s) = Y(s)/R(s)$  for the following system

# Read Free Homework 3 Solutions 1 Uppsala University

represented in state space.  $x_1 = 2.64010001325375x + 2.640010375r$   
 $y = h100ix$  Solution: Using the formula  $G(s) = C(sI - A)^{-1}B$ , we can solve for the transfer function as follows:  $(sI - A)^{-1} = \frac{1}{s^3 + 5s^2 + 2s + 3} \begin{bmatrix} s^2 + 5s + 2 & 1 & 3 \\ s^2 + 5s & 0 & 0 \\ 0 & 0 & 0 \end{bmatrix}$  ...

Leo's z -score:  $z_L = \frac{4948 - 4313.583}{5261.807} = 1.089$ . Mary's z -score:  $z_M = \frac{5513 - 4313.583}{5261.807} = 0.312$ . The z -scores tell you the number of standard deviations away from the mean the observation is. It gives you a way to compare observations from different groups. c.

Jackson 3.1 Homework Problem Solution Dr. Christopher S. Baird University of Massachusetts Lowell  
PROBLEM: Two concentric spheres have radii  $a$ ,  $b$  ( $b > a$ ) and each is divided into two hemispheres by the same horizontal plane. The upper hemisphere of the inner sphere and the lower hemisphere of the outer sphere are maintained at potential  $V$ . The other hemispheres are at zero potential.
