When using Guide Number, do pay close attention to zoom and ISO. The flash manufacturer likely carefully measured published guide numbers in a very wide open and dark space, eliminating ambient and reflection from close walls or objects. Bright ambient or reflections in a small room might increase the light level a bit.

Where To Download How To Use Flash Guide Number

When setting photoflash exposures, the guide number (GN) of photoflash devices (flashbulbs and electronic devices known as "studio strobes", "on-camera flashes", "electronic flashes", "flashes", and "speedlights") is a measure photographers can use to calculate either the required f-stop for any given flash-to-subject distance, or the required distance for any given f-stop. To solve for either of these two variables, one merely divides a device's guide number by the other.

I've outlined the install process for Windows, Mac, and Linux in Method 1 at the following guide, so head over there to get started. Don't Miss: How to Install ADB & Fastboot on Windows, Mac, or Linux. Step 2: Enable OEM Unlocking. In order to flash images using Fastboot, your device's bootloader will need to be unlocked. If you've already done this, you can skip ahead to Step 3.
