Journey On The Rock Cycle

Welcome to Rocky's
journey around the rock
cycle! Hi, my name is

Get Free Journey On The

Rocky. I am your guide on the journey around the rock cycle. The rock cycle is a continuous process that occurs over millions of years. It makes new rock, destroys old rock, and recycles the ingredients of the Earth's crust over and over again! If you want to join me on an amazing journey under the Earth click on the

Journey on the Rock
Cycle A useful aid in
visualizing the rock
cycle is shown above.
The three major rock
types, igneous,
metamorphic, and

Get Free Journey On The Sedimentary, are shown.

As you see, each may form at the expense of another if it is forced out of equilibrium with its physical or climatic environment by either internal or surficial forces.

Journey on the Rock Cycle - Earth

One 'journey' around the rock cycle has been

Get Free Journey On The

completed: magma cools to form igneous rocks (volcanic and intrusive); the rocks are weathered to loose material; the loose material (sediment) is transported and then deposited. The sediment turns into sedimentary rock. The sedimentary rock is squeezed and baked to form metamorphic rock.
