During the last 20 years several less-invasive anterior approaches to the lumbar spine have become standard, including the extreme lateral lumbar interbody fusion. Although it is associated with a lower risk of vascular injury compared with anterior midline approaches, neuromonitoring is considered mandatory to avoid neurologic complications. Interestingly, despite neuromonitoring, the reported risk of neurologic deficits with the extreme lateral transpsoas approach is greater than observed ...

Lumbar Interbody System Neurosurgery Resident the transforaminal lumbar interbody fusion (T.L.I.F.®) technique has gained wide acceptance in recent years. An adaptation of the posterior lumbar interbody fusion (PLIF) technique first described by Cloward, the T.L.I.F. employs a unilateral approach to the disc space through the intervertebral foramen.

Lateral lumbar interbody fusion is a minimally invasive technique first described by Ozgur et al. 1). LLIF allows the surgeon to access the intervertebral space via a minimally invasive direct lateral approach through the psoas muscle. The advantage of LLIF over the traditional anterior approach is the avoidance of exposure of the abdominal viscera, large vessels, and sympathetic plexus.

Transforaminal lumbar interbody fusion is a safe and effective method for achieving circumferential spinal fusion via a single-stage procedure. This procedure is particularly useful in restoring disc space height and lumbar lordosis. Degenerative disc disease, Fusion, Interbody, Low back pain, Lumbosacral fixation

Transforaminal Lumbar Interbody Fusion: Technique ...

Background: It remains unclear if minimally invasive transforaminal lumbar interbody fusion (MI-TLIF) is comparable to traditional, open TLIF because of the limitations of the prior small-sample-size, single-center studies reporting comparative effectiveness. Objective: To compare MI-TLIF to traditional, open TLIF for grade 1 degenerative lumbar spondylolisthesis in the largest study to date ...

Integrity Implants ' Flarehawk interbody cage. Integrity Implants has announced positive data from a retrospective study demonstrating favourable fusion efficacy with its FlareHawk interbody implant. The study, ' Transforaminal/posterior lumbar interbody fusion with the FlareHawk expandable interbody fusion device, ' was led by principal investigator Domagoj Coric, chief of neurosurgery at Carolinas Medical Center and Spine Division chief of Atrium Musculoskeletal Institute (Charlotte, USA).

Positive fusion data reported for FlareHawk interbody implant

Anterior lumbar interbody fusion represents another alternative to a 360-degree spinal fusion but requires a separate anterior approach. In 1982, with the rationale of offering a secure fusion in a one-stage operation, Harms and Rolinger pioneered a modified PLIF technique called transforaminal lumbar interbody fusion (TLIF). Compared with the more traditional techniques, it provides several advantages by accessing the spinal canal and disc via a path that runs through the far-lateral ...

BACKGROUND: Anterior, direct lateral, and transforaminal lumbar interbody fusions (ALIF, DLIF, and TLIF) are usually combined with posterior fixation to treat degenerative spinal diseases. Outcomes of ALIF, TLIF, or DLIF combined with a new wedge-shaped interfacet cage plate have not been reported.
