In contrast, managing forests as complex adaptive system is a bottom-up approach. Besides the provision of ecosystem services, management activities also consider the adaptive capacity, i.e., the ability of ecosystem to respond to changes. The adaptive or transformative capacity of ecosystem is more and more important in a

management of forests for a wide variety of ecosystem goods and services. One of these approaches is based on the science of complex systems. Viewing forests as Complex Adaptive System (or CAS) is an emerging paradigm based on development of systems theory in other fields, such as physic, medicine, and socio-economics.
