components, Oracle  
XDK provides high  
performance XML  
support that has been  
proven in demanding  
enterprise production  
environments.

XML DB is an out-of-the-box solution for storing and retrieving XML documents within Oracle. In addition, the registration of XML schemas allows XML DB to shred the XML documents and store them as object-relational structures to improve query performance within the database. No additional software is

needed for this process  
as all the functionality is  
built into the Oracle9i  
Release 2 kernel.

## *ORACLE-BASE - XML DB*

Oracle XML DB  
reduces memory  
overhead associated  
with DOM  
programming by  
managing XML schema-  
based XML documents

using an internal in-memory structure called an XML Object (XOB). A XOB is much smaller than the equivalent DOM since it does not duplicate information like tag names and node types, that can easily be obtained from the associated XML schema.
