Accurate diagnosis and staging of pancreatic ductal carcinoma are therefore of great importance. This paper reviews the state of the art for such diagnostic modalities as computed tomography, magnetic resonance imaging, endoscopic ultrasound, positron emission tomography, and laparoscopic surgery and laparoscopic ultrasound for diagnosis and staging of pancreatic

This chapter will review the current concepts surrounding pancreatic cancer cachexia, its clinical diagnosis, pathophysiology, and its known and proposed therapeutics. A multimodal approach utilizing nutritional support and pharmaceutical therapies is proposed to lead to the most successful management of pancreatic cancer cachexia.

Pediatric Pancreatic Tumors: A Review of Current Concepts ...

Pancreatic cancer begins in the tissues of your pancreas – an organ in your abdomen that lies behind the lower part of your stomach. Your pancreas releases enzymes that aid digestion and produces hormones that help manage your blood sugar.

Several types of growths can occur in the pancreas, including cancerous and noncancerous tumors.

carcinogenesis occurs through an accumulation of genetic alterations that result in deregulation of tumor cell-autonomous and nontumor cell-autonomous pathways.

Emerging concepts in pancreatic cancer medicine: targeting ...

Pancreatic cancer is a devastating disease and resection at an early disease stage is the best chance of cure. Less than 20% of all patients present with a resectable tumor, while another 20% to 30% have locally advanced pancreatic cancer and the majority of the patient suffer from metastatic disease. Recently, it has been recognized that there is a 4th group of patients with so-called borderline resectable disease.

vascular resection: current ...

Pancreatic cancer remains one of the most aggressive tumours with a 5-year survival rate of less than 5%. The dismal prognosis of this tumour entity that is associated with a high degree of drug resistance has not changed over the past decades. Since 1997, gemcitabine-based regimens have been the therapy of choice for advanced pancreatic cancer.

Current concepts and novel targets in advanced pancreatic ...

Standard treatment for pancreatic cancer usually consists of surgery, chemotherapy, radiation, or combinations of each, depending on the cancer's stage. Beyond these standard treatments, NCI scientists continue to look for ways to treat pancreatic cancer more effectively.

□Pancreatic cancer is the third leading
cause of cancer death in the US, with
primary ductal adenocarcinoma
(PDAC) the most common type. The
five-year survival rate is very much
dependent on the stage of the cancer
at the time of diagnosis. If found early,
or at Stage 1, the five-year survival
rate is 39 percent.
