Cold and Dark starts - PMDG General Forum - The AVSIM ...

I guess you are going to have to start up a 737, shut down manually, save the flight and make it the default flight (after shutting down completely).Restart FS2004. You should be in a cold and dark cockpit situation. From there open the PMDG cold and dark flight. Make THAT flight the default.Restart FS2004.

Done.Hope this helpsRegards,Goran

How to start 737TNG "cold & dark" - PMDG General Forum ...

I haven't tried this myself yet, but in a cold & dark cockpit you can also access the FMS based setup/configuration menus by pressing and holding the MENU button on the CDU until the CDU screen lights up (refer NGX Introduction document, page 43).

When on the FS9 Main Menu, click on 'Select a flight'. Look for the PMDG Cold and Dark flight (it's somewhere there in the list!) and load it (this is the PMDG preferred method!!! PMDG advises NOT to load a Cessna or whatever and change it to the 737NG!)). Now you are in 737NG with a cold and dark cockpit.

In the PMDG NGXu I have set the startup panel state to be cold and dark just like in the original FSX model however if I then load the default panel state in the FMC everything in the plane changes to a ready to fly state except the engines are not running.

Before start procedure prepares the plane for start and flight. The crew finishes setting FMC (pilot flying will set his CDU to TAKEOFF REF page and pilot monitoring will set it to LEGS page), HDG (or Track) and the first altitude should be entered in MCP at this stage.
