Flange joints are torque tight with the help of a torque wrench (Manual or hydraulic wrench). The clamp load produced during tightening is higher than 75% of the fastener 's proof load. To achieve the benefits of the pre-loading, the clamping force in the screw must be higher than the joint separation load.

Flange Bolt-Up Bolting Torque Table 1 - wermac.org
This is due to the fact that API flanges typically operate at a higher pressure in comparison to their ANSI/ASME flange counterparts. The seal of an RTJ gasket occurs under the force of closing the bolt and hardware after mating one flange to another. Typically, the gaskets are made of softer material than the metal of the flanges they are sealing.
