Wireless Local Area Networks (WLANs) use short-range wireless to reach at least 300 feet, at speeds up to 11 Mbps (IEEE 802.11b) and 54 Mbps (802.11a/g). WLANs connect computers-desktops, laptops, mobile devices and Pocket PC-enabled phones-to each other and to adjacent networks via wireless access points or gateways.

WLAN security: Best practices for wireless network security

Place the network ' s router, switches, and other network equipment in a locked cabinet or wiring room to prevent access and tampering. Ensure all network cabling is ran out of reach from the public and even users within the organization to reduce the chances of someone cutting the cable and tapping into the cable.

Best Ways to Secure your Wireless Network

Wired Equivalent Privacy in a Wireless LAN. The first, most basic level of a secure wireless LAN is the presence of a Wired Equivalent Privacy (WEP) key. The WEP key is unique to the client and provides the client with the appropriate level of network access. WEP keys encrypt both unicast and multicast messages.
