Statistics, the science of collecting, analyzing, presenting, and interpreting data. Governmental needs for census data as well as information about a variety of economic activities provided much of the early impetus for the field of statistics. Currently the need to turn the large amounts of data available in many applied fields into useful information has stimulated both theoretical and practical developments in statistics.

According to UIS data, less than 30% of the world's researchers are women. UIS data also show the extent to which these women work in the public, private or academic sectors, as well as their fields of research. But to truly reduce the gender gap, we must go beyond the hard numbers and identify the qualitative factors that deter women from pursuing careers in science,
