For example, the method charAt () returns the individual character in the String at a given index. Note that Strings are just like arrays in that the first character is index #0! String message = "some text here."; char c = message.charAt (3); println (c); // Results in 'e'. Another useful method is length ().

Strings and Drawing Text Processing.org

text () Draws text to the screen. Displays the information specified in the first parameter on the screen in the position specified by the additional parameters. A default font will be used unless a font is set with the textFont () function and a default size will be used unless a font is set with textSize ().
