June 13, 2017 Categories. Linux Certifications 5 Comments. A kernel module is a program which can loaded into or unloaded from the kernel upon demand, without necessarily recompiling it (the kernel) or rebooting the system, and is intended to enhance the functionality of the kernel. In general software terms, modules are more or less like plugins to a software such as WordPress.

Modules can be considered as parts of kernel code. A module never runs by itself, but can be loaded or removed into the kernel while the system is running. Once a module is loaded into the kernel, it behaves like a part of the actual kernel itself. The kernel modules are mainly used to load device drivers.
